**Landing area**
- Gives a positive first impression for a prospective employer or client.
- Engages the audience to want to explore more, including interesting information that a prospective employer or organization would want to know.
- Demonstrates your unique personality.
- Shows how you would fit on someone's team and in their corporate culture.
- Clear and concise, only including information that belongs here.

Technical portfolio
- Describes technical projects you have completed or would like to complete.
- Provides interesting details for the audience which may include links to your TAMU GitHub repository for these projects, thumbnails, and descriptions.

Qualifications section
- Provides your resume in an easily accessible format (PDF preferred but HTML acceptable).
- Describes your technical skills in addition listing them on your resume.
- Discusses your technical areas of interest in Computer Science and why.

Service section
- Describes ways you give back to your community, either through volunteering, mentoring, or other similar activities (may include areas you would like to contribute to if not already).

AI-generated page

From <https://canvas.tamu.edu/courses/252242/pages/project-1-description-and-resources>

Tentative style choices:
- Generic Website with a modernish font (clean sanserif font and a blue theme)
- Old-timey newspaper design (serif font, lots of tans and browns, maybe an old paper texture for the background)
- Computer terminal design (monospace font and dark themed)
- A sketchy looking 90s website that looks like it has malware

Note: overall goal is a relatively minimalist website that focuses on cleanness, consistency in it's styling, and a few simple tasks over robust functionality.
